

## **PANEL: A NETWORK SECURITY RESEARCH AGENDA**

Panel Chair: Fred Schneider (Cornell University, United States)  
Steven M. Bellovin, AT&T Labs-Research  
Steve T. Kent, BBN Technologies/GTE Internetworking  
Roger Needham, Microsoft  
Hilarie K. Orman, DARPA

Research in network security has been ongoing for over two decades. A few widely disseminated, public reports have appeared suggesting topics that should be pursued in this (and related security) arenas, notably the National Research Council's 1990 report "Computers at Risk" and the more recent NRC report "Trust in Cyberspace."

This panel brings together a diverse set of individuals with experience in network security R&D, from industry, government, and academia. The panelists will present views on the state of R&D in this arena, including recommendations from the "Trust in Cyberspace" report.
