# Broader Context: Privacy Incidents Database (PrIncipedia)

<http://go.ncsu.edu/privacyincidents>

# Defining Privacy Incidents: Who should Care and Why?

## Organizations

- ▶ Identify and respond to privacy incidents

## Research community

- ▶ Analyze privacy incidents to inform technology improvements

## Government

- ▶ Inform policy

These require an **actionable** and **accurate** definition of a *privacy incident*

# Defining Privacy Incidents

## Defining privacy incidents is nontrivial

- ▶ Attitudes vary by cultures and context
- ▶ Perceptions vary by stakeholder groups (e.g., end users, product developers, policy makers, and legal scholars)

We conduct a first study on end user understanding of privacy incidents involving 482 Amazon Mechanical Turk (AMT) users

# Methodology

## 1. Working definition

Formulate a working definition of privacy incident

## 2. Research questions (RQs)

Formulate RQs corresponding to different aspects of the definition

## 3. User study

Provide examples and counterexamples to end users

## 4. Definition validation

Measure precision of the definition based on users' perceptions

# Working Definition

## A privacy incident is

1. An instance of accidental or unauthorized **collection, use** or **exposure** of sensitive information, OR,
2. An event that creates the **perception** that unauthorized collection, use or exposure of sensitive information may happen, AND,
3. Involves information that is either being collected, used or shared in **digital** form.

# Research Questions

- RQ1 Do end users perceive the collection, usage and/or sharing of sensitive data to be closely associated with privacy incidents?
- RQ2 Do end users recognize events in which it is perceived or anticipated that sensitive data is or will be collected, used or shared, as privacy incidents?
- RQ3 Are there privacy events beyond the scope of the working definition (e.g., the release of privacy-enhancing products or privacy laws) that end users recognized as incidents?

## User Study: Questionnaire (Partial)

Read the news article in the URL below and answer the following questions.

`${articleUrl}`

1. Is this article primarily about a privacy incident?

Yes    No    Not sure

2. Is this article primarily concerned with the collection, use or exposure of sensitive information?

Yes    No    Not sure

3. Is this article primarily concerned with information that is either being collected, used or shared in digital form?

Yes    No    Not sure

4. Consider now that for an article to be primarily about privacy incident, the answers to the previous two questions must be yes. Given this, do you think the article is primarily about a privacy incident?

Yes    No    Not sure

## User Study: Positive Examples (Set $P$ )

**Data Breach** Blippy allows some credit card numbers to be indexed by search engines

**Emerging Technology** Police departments building DNA databases of potential suspects

**Surveillance** PA SD remotely activates cameras to locate school laptops

**Targeting** Facebook uses visits to sites with like button to target ads

**Revenge Porn** Woman posts revenge porn pictures; convicted under UK law

## User Study: Negative Examples (Set N)

**Security Breach** Security of an electronic road sign is compromised

**Physical Security Breach** Security breach at a Donald Trump rally

**Celebrity Privacy Request** Professional athlete asks for privacy as he enters drug rehab

**Wildlife Privacy** Park visitors disturb privacy of animals during mating season

**Privacy Standards** EFF announces a stronger DNT standard

**Security/Privacy Law** Companies warn about privacy implications of cybersecurity bill

# Participants and Measurements

## Study Units

- ▶  $|P| = 204$  and  $|N| = 63$

## Participants

- ▶ 482 unique Amazon Mechanical Turk users from the US
- ▶ At least three unique responses per HIT
- ▶ Maximum of three HITs per participant
- ▶ Payment: USD 0.7 per HIT

## Measurements

- ▶ Measure Precision( $P$ ) and Precision( $N$ )
- ▶ Measure *initial* and *final* Precision

## Findings: Collection/Usage/Sharing (RQ1)

- ▶ Initial Precision( $P$ ) = 0.799, and Final Precision( $P$ ) = 0.794
- ▶ Initial Precision( $N$ ) = 0.549, and Final Precision( $N$ ) = 0.600

Participants view sensitive data collection, usage and/or sharing as core to their understanding of the term “privacy incident”

Participants more likely to see the collection, usage and sharing aspects as sufficient for a privacy incident, than as *necessary*

## Findings: Anticipated/Perceived Privacy Harm (RQ2)

13 articles about emerging technologies (e.g., DNA testing) in  $P$

- ▶ Initial Precision( $P$ ) = 0.769, and Final Precision( $P$ ) = 0.769

5 articles about privacy policy changes in  $P$

- ▶ Initial Precision( $P$ ) = 0.714, and Final Precision( $P$ ) = 0.643

Participants are more inclined than privacy law to view perceived or anticipated privacy issues as grounds for an incident

## Findings: Definition Scope (RQ3)

- ▶ Only 3 of the 13 articles about legal privacy events were viewed as non-incidents
- ▶ 2 of the 3 articles about digital security incidents that do not involve a privacy breach were reported to be privacy incidents

Participants do not consistently view privacy law events and security breaches that do not involve privacy breaches as non-incidents

- ▶ None of the 4 such articles about cyberbullying, involving sexual assault, were identified as privacy incidents

Cyberbullying events are not consistently viewed as privacy incidents

## Findings: Definition Scope (RQ3)

- ▶ 14 articles from  $P$  that contain the term “privacy” were reported to not be privacy incidents by a majority of participants
- ▶ 4 of the 25 articles in  $N$  that were reported to be privacy incidents, do not contain the term “privacy”

Participants do not seem to consider the presence of the term “privacy” as a necessary or sufficient condition to treat an event as privacy incident

## Summary and Directions

- ▶ High and stable precision for  $P$

Our working definition is compatible with end users' perceptions about privacy incidents

- ▶ Increase in precision for  $N$  after definition
- ▶ Substantial disagreement remains in  $N$

Determine if disagreements suggest a way to improve the definition

## Directions

Read the news article in the URL below and answer the following questions.

[\\${articleUrl}](#)

1. In a sentence, please summarize the article above.

\_\_\_\_\_

2. Briefly describe why it is or is not a privacy incident.

\_\_\_\_\_

3. Consider now that for an article to be primarily about privacy incident, the answers to the previous two questions must be yes. Given this, do you think the article is primarily about a privacy incident?

Yes    No    Not sure

4. If you changed your mind, please describe why.

\_\_\_\_\_
