# THE LASER WORKSHOP

# Learning from Authoritative Security Experiment Results

Co-located with the 2023 Network and Distributed System Security (NDSS) Symposium

March 3, 2023

### LASER Workshop Series

Focuses on learning from and improving cybersecurity experiment results

The workshop strives to provide a highly interactive, collegial environment for discussing and learning from experimental methodologies, execution, and results

Ultimately, the workshop seeks to foster a dramatic change in the experimental paradigm for cybersecurity research, improving the overall quality and reporting of practiced science

https://www.laser-workshop.org/

### Accelerating Cybersecurity Research

While safety and security challenges brought on by new technological advances are mounting, the overall progress in cybersecurity research to meet these challenges has historically been slow

The lack of scientific progress in cyber security is due, in part, to issues in three areas, on which past LASER workshops have focused:

- Learning from and reporting of unsuccessful or unanticipated results, leading to a reduction in the repetition of past failures
- Adequate reporting of experiments, leading to an ability to understand the approach taken and reproduce results
- Solid experiment methodologies and execution, leading to reliable, conclusive results

# LASER 2020-2023 Workshops

Authors of accepted NDSS and ACSAC papers are invited to present the experimental aspects of their work

Authors lead a focused discussion on the experimental approaches and methodologies used to obtain their results

Authors are invited to write new papers focused on their experimental work

- Published in post-workshop proceedings
- Could be guided, in part, by the discussions and interactions at the workshop

### Workshop Format

The workshop will be structured as a true "workshop" in the sense that it will focus on discussion and interaction around the topic of

Experimental methodologies, execution, and results

Authors will lead the group in a discussion of the experimental aspects of their work

Ultimate goal is to share and learn from each other and encourage improvements in experimental science in cybersecurity research

Additional information, abstracts, bios, and links to papers are available in the LASER Workshop program on the NDSS website at <u>https://www.ndss-symposium.org/ndss2023/co-located-events/laser/</u>

### Areas of Interest

- Research questions and/or hypothesis
- Experimental methodologies used and/or developed
- Experiment design
- Use of simulation, emulation, virtualization, and/or physical testbeds
- Use of specialized hardware including CPS and IoT devices
- Modeling of human-behavior characteristics
- Software tools used and/or developed to perform experimentation
- Approaches to experiment validation, monitoring, and data collection
- Datasets used and/or developed to perform experimentation
- Measurements and metrics
- Analytical techniques used and/or developed to evaluate experimental results

# **Interesting Meta-Questions**

- Did you use experimentation artifacts borrowed from the community?
- Did you attempt to replicate or reproduce results of earlier research as part of your work?
- What can be learned from your methodology and your experience using your methodology?
- What did you try that did not succeed before getting to the results you presented?
- Did you produce any intermediate results including possible unsuccessful tests or experiments?

#### **Session Format**

Time	Торіс
10 mins	Introduce the main topic of your work (e.g., federate learning or honeypots)
20 mins	Discuss the experiments or evaluations performed, including the areas of interest (as applicable)
10 mins	Lead the group in a discussion of the meta-questions
5 mins	Wrap up discussion (next steps, post-workshop paper)
45 mins	TOTAL

# Agenda (1)

#### Workshop Welcome, Goals, and Agenda

#### **Session 1**

- VICEROY: GDPR-/CCPA-compliant Enforcement of Verifiable Accountless Consumer Requests, Yoshimichi Nakatsuka (University of California, Irvine)
- BinaryInferno: Experiment Design and Evaluation Considerations When Reverse Engineering Message Formats from Network Traces, Jared Chandler (Tufts University)

#### **Session 2**

- Human-Subject Research Strategies on Social Media Misinformation, Filipo Sharevski (DePaul University)
- Investigating HbbTV Privacy Invasiveness Across European Countries, Carlotta Tagliaro (TU Wien)

# Agenda (2)

#### Keynote Talk

• Keynote: Cybersecurity Experimentation of the Future, Jelena Mirkovic (USC Information Sciences Institute)

#### **Session 3**

- Measuring Messengers: Analyzing Infrastructures and Message Timings to Extract User Locations in Instant Messengers, Theodor Schnitzler (Research Center Trustworthy Data Science and Security, TU Dortmund, and Ruhr-Universität Bochum)
- Evaluating Wireless Attacks Against CCS Electric Vehicle Charging, Sebastian Köhler (University of Oxford)

#### Wrap-up

# LASER "Experiment"

H1: NDSS and ACSAC authors are excited about sharing their experimental methodologies, execution, and results

H2: NDSS and ACSAC authors and LASER participants are interested in learning about other researchers' experimental methodologies, execution, and results

**H3**: NDSS and ACSAC authors and LASER can work collaboratively to improve experimental science in cybersecurity research
