

NDSS

SYMPOSIUM 2023

By the Numbers

The NDSS Symposium is an annual event focused on the latest developments in network and distributed system security. An incubator of ideas, it brings together leading academics, industry researchers, and security practitioners to discuss peer-reviewed research and to apply, deploy, and advance the state of practical security technologies.

Almost 500 leading academics, industry researchers, and security practitioners from around the world gathered in San Diego, California from 27 February – 3 March, 2023, for keynotes, paper presentations, poster sessions, co-located workshops and symposia, and a dedicated session celebrating the 30 year anniversary of the NDSS Symposium. a further 130 participants attended remotely.

The event was made possible by multiple sponsors and partners, who generously demonstrated their organization's support for emerging research and for the next generation of leaders in the security field.
