Transient cause

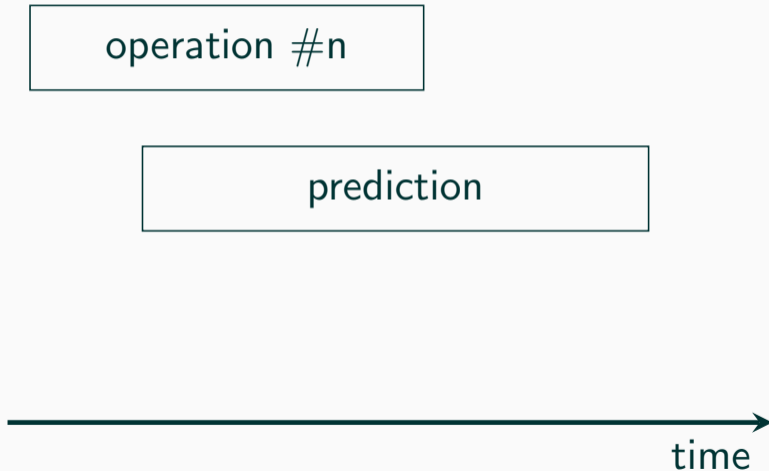

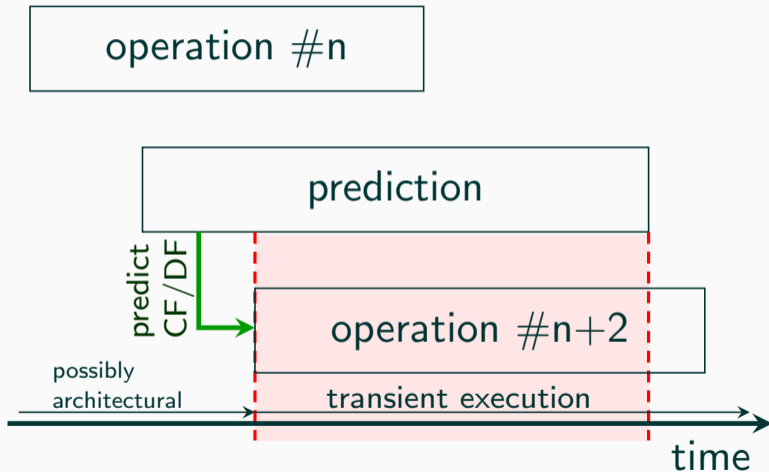

operation #n

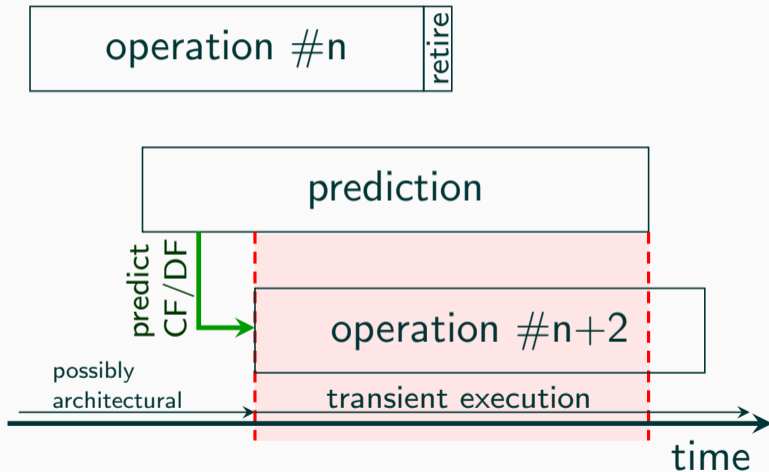

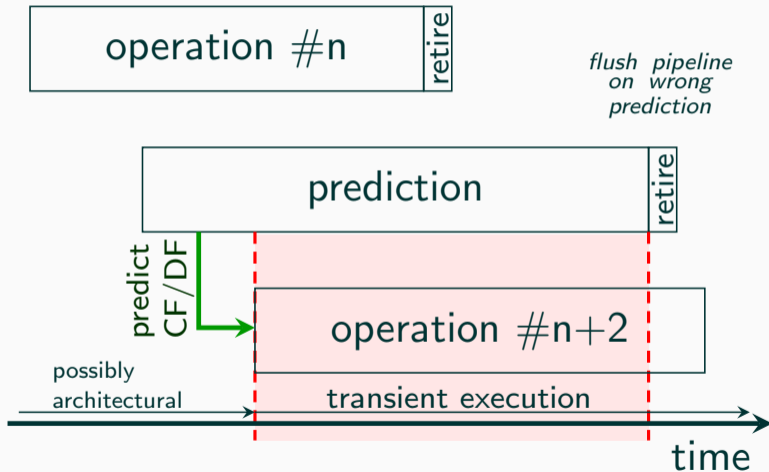

time

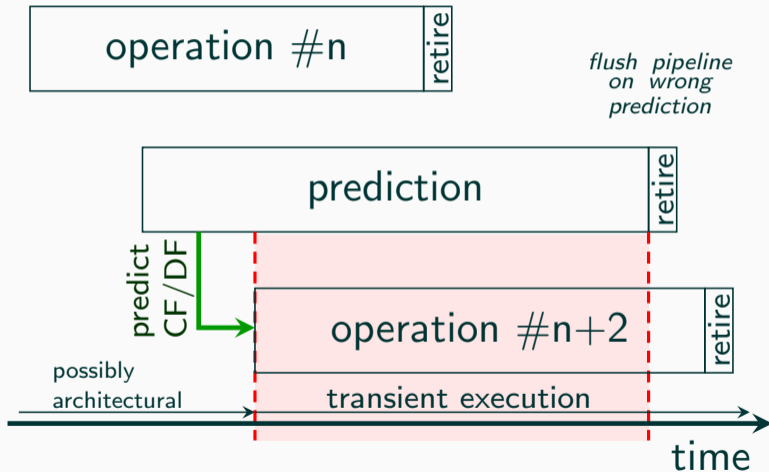

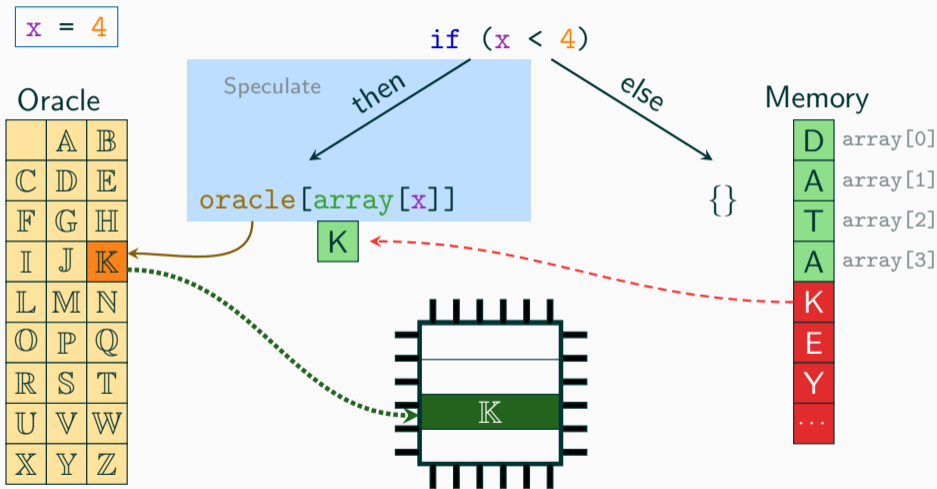

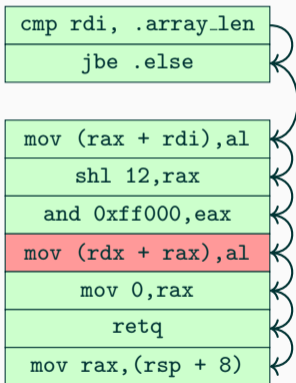

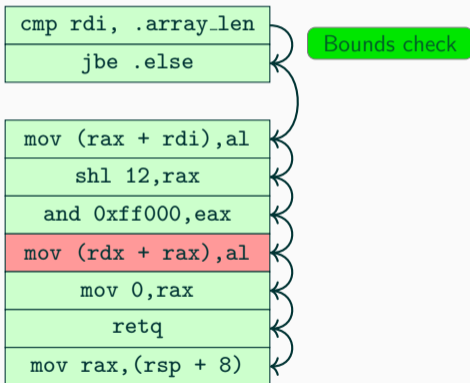

```
if(x < array_len) {  
    y = oracle[array[x] * 4096];  
}
```

Unprotected

Unprotected

Unprotected

```
cmp rdi, .array_len  
jbe .else
```

Bounds check

```
mov (rax + rdi),al  
shl 12,rax  
and 0xff000,eax  
mov (rdx + rax),al  
mov 0,rax  
retq  
mov rax,(rsp + 8)
```

Access out-of-bounds array [x]

Unprotected

```
cmp rdi, .array_len  
jbe .else
```

Bounds check

```
mov (rax + rdi),al  
shl 12,rax  
and 0xff000,eax
```

Access out-of-bounds array [x]

Secret in rax

```
mov (rdx + rax),al  
mov 0,rax  
retq  
mov rax,(rsp + 8)
```

Unprotected

```
cmp rdi, .array_len  
jbe .else
```

Bounds check

```
mov (rax + rdi),al  
shl 12,rax  
and 0xff000,eax
```

Access out-of-bounds array [x]

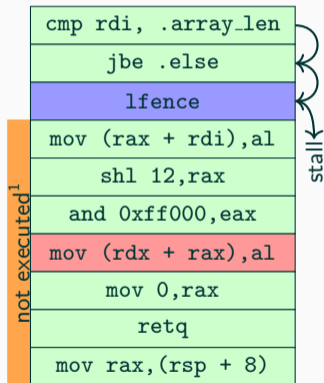

Secret in rax

```
mov (rdx + rax),al  
mov 0,rax  
retq  
mov rax,(rsp + 8)
```

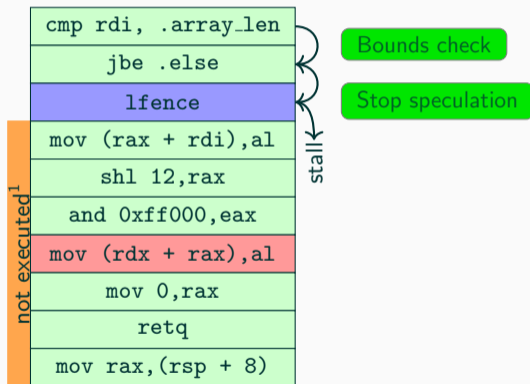

Access secret-dependent memory location

```
if(x < array_len) {  
    asm volatile("\lfence");  
    y = oracle[array[x] * 4096];  
}
```

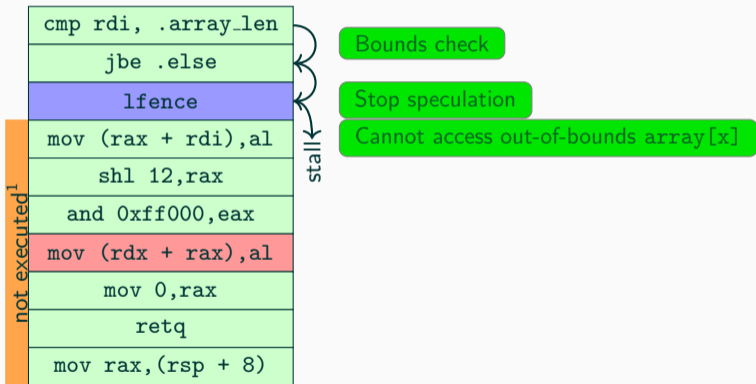

Serializing Barrier

Serializing Barrier

Serializing Barrier

- 62% – 74.8% overhead

- 62% – 74.8% overhead
- Additional overhead for other Spectre variants 5% – 50%

- 62% – 74.8% overhead
- Additional overhead for other Spectre variants 5% – 50%
- Identify leaking branches → difficult

From identifying **branches**...

From identifying **branches**...

From identifying **branches**...

...to identifying **secrets**

Annotated secrets...

Annotated secrets...

Annotated secrets...

...stored in non-speculatable
memory

Secrets can transiently enter registers...

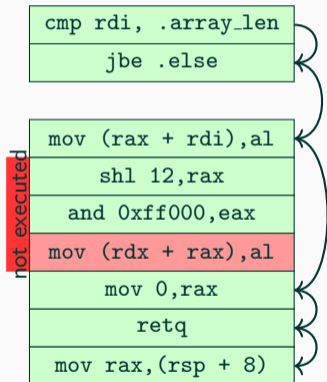

Secrets can transiently enter registers...

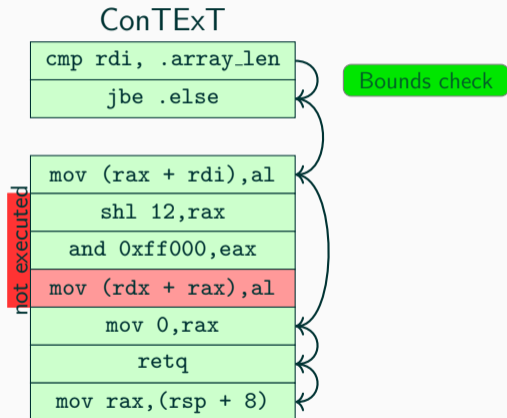

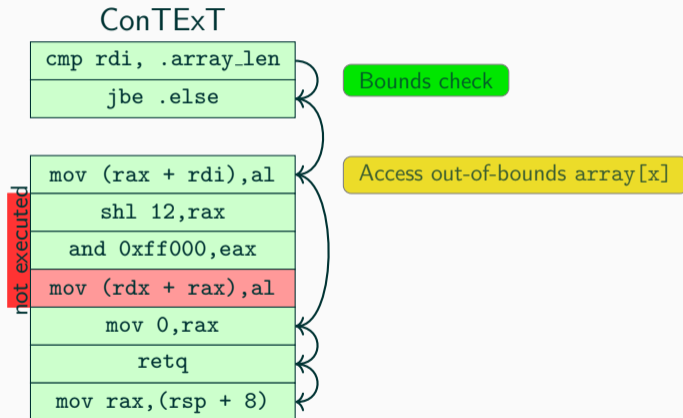

...but not transiently leave them

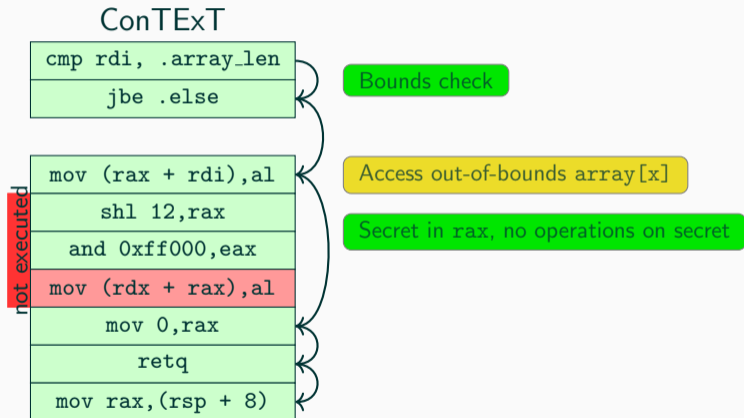

```
char nospec array[16];  
  
if(x < array_len) {  
    y = oracle[array[x] * 4096];  
}
```

ConTEXT: A Generic Approach for Mitigating Spectre.

- ConTE_XT is **data-based** instead of instruction-based

- ConTE_XT is **data-based** instead of instruction-based
- **Mitigates** the **root cause** (leakage) instead of the covert channel

- ConTEXT is **data-based** instead of instruction-based
- **Mitigates** the **root cause** (leakage) instead of the covert channel
- Applicable to **all Spectre variants** with low overhead

- ConTEXT is **data-based** instead of instruction-based
- **Mitigates** the **root cause** (leakage) instead of the covert channel
- Applicable to **all Spectre variants** with low overhead
- All changes are fully **backward compatible**

We thank our anonymous reviewers for their comments and suggestions that helped improving the paper. The project was supported by the European Research Council (ERC) under the European Union's Horizon 2020 research and innovation programme (grant agreement No 681402). It was also supported by the Austrian Research Promotion Agency (FFG) via the K-project DeSSnet, which is funded in the context of COMET - Competence Centers for Excellent Technologies by BMVIT, BMWFW, Styria and Carinthia. This work has additionally been supported by the Austrian Research Promotion Agency (FFG) via the project ESPRESSO, which is funded by the Province of Styria and the Business Promotion Agencies of Styria and Carinthia. This work has also been supported by the Austrian Research Promotion Agency (FFG) via the competence center Know-Center (grant number 844595), which is funded in the context of COMET – Competence Centers for Excellent Technologies by BMVIT, BMWFW, and Styria. Additional funding was provided by generous gifts from ARM and Intel. Any opinions, findings, and conclusions or recommendations expressed in this paper are those of the authors and do not necessarily reflect the views of the funding parties.
