**Dynamic Analysis on Binaries**

DITTANY: Strength-Based Dynamic Information Flow Analysis Tool for x86 Binaries
   *Walid J. Ghandour and Clémentine Maurice (Univ. Lille, CNRS, Inria)*

FitM: Binary-Only Coverage-Guided Fuzzing for Stateful Network Protocols
   *Dominik Maier, Otto Bittner, Julian Beier, and Marc Munier (TU Berlin)*

**Learning on Binaries**

Detecting Obfuscated Function Clones in Binaries using Machine Learning
   *Michael Pucher (University of Vienna), Christian Kudera and Georg Merzdovnik (SBA Research)*

Beyond the C: Retargetable Decompilation using Neural Machine Translation
   *Iman Hosseini and Brendan Dolan-Gavitt (New York University)*

**Open Problems in Binary Analysis**

The Inconvenient Truths of Ground Truth for Binary Analysis
   *Jim Alves-Foss and Varsha Venugopal (University of Idaho)*
Message from the Program Co-Chairs

We would like to thank all the researchers for making interesting submissions to the Binary Analysis Research (BAR 2022) workshop.

The papers for the workshop were selected after a thorough review by experts in the field of binary analysis - we thank our program committee members for this. The selected papers tackle important and hard problems in binary analysis and present promising solutions.

Finally, we would like to congratulate all the authors of the accepted papers and thank the conference organizers for their support in creating a successful workshop.

Aravind Machiry and Kristopher Micinski
Program Co-Chairs, BAR 2022
